SPOOFING ATTACK

A spoofing attack occurs when a person pretends to be someone else in order to trick their target into sharing their personal data or performing some action on behalf of the spoofer.

Spoofing Types

- Email Spoofing
- DNS Spoofing
- IP Spoofing DDoS
- ARP Spoofing

How to Prevent Attacks

- Packet Filtering with Deep Packet Inspection
- Authenticate Users and Systems
- Use Spoofing Detection Software
- Use Encrypted and Authenticated Protocols
