

DON'T LET A SINGLE STOLEN PASSWORD START A DOMINO EFFECT OF BREACHES...

Use a **password manager** to store your **strong** and **unique** passwords.

Never use the same passwords across your **work** and **personal** accounts.

As always: If it is available, make sure to enable **MFA**.

If a password is **breached**, **change** that password **right away**.

Never save passwords on apps or browsers on **shared devices**.
