

Unlock Proactive Threat Detection with the **infotex** Mirage Honeypot!

With our 25+ years of experience in cybersecurity, **infotex** knows that organizations of all types and sizes are facing increasingly sophisticated and stealthy cyber threats in today's world. The tried-and-true traditional security tools are great, but often they don't alert you till AFTER the damage from a cyber threat is already done. Our Managed Honeypot Service offers a way to proactively combat these cyber threats as a low-risk solution to detect, analyze, and respond before your systems and data are impacted. We establish and manage a decoy system that mimics real assets that lure threat actors into an isolated environment where their attack actions can be observed and analyzed. This gives you a peek into the behaviors of actual attacks while filtering out the false positive noise that can come from other tools.

Features and Benefits of our Managed Honeypot Service:

- **24/7 Real-Time Monitoring** – There will always be an experienced SOC analyst monitoring alerts from Triguard® from your honeypot.
- **Early Detection** – Spot threats before they reach production/exfiltration.
- **Actionable Intelligence** – Understand the bad actor's strategies and techniques.
- **Reduced Risk** – The attractive isolated environment ensures no impact on your real systems.
- **Compliance Support** – Demonstrates proactive security posture.
- **Fully Managed** – No additional burden on your internal technical personnel.
- **Scalable and Cost-Effective** – Proven effectiveness in several different industries.
